

Watson and IBM i :
Building a cognitive business

Jesse R. Gorzinski
jgorzins@us.ibm.com

Disruption is upon us.

The biggest taxi company owns no cars.

The largest accommodation company owns no real estate.

The largest retailer carries no inventory.

The biggest media company owns no content.

This disruption is fueled by three forces.

The proliferation of different types of data.

The ability to build business in code with the API economy.

The powerful capabilities and outcomes brought on by cognitive computing.

More devices are creating more information.

1,200,000 lines of code in a smartphone

80,000 lines of code in a pacemaker

100,000,000 lines of code in a new car

5,000,000 lines of code in smart appliance

Three capabilities differentiate cognitive systems from traditional programmed computing systems...

Understanding
Cognitive systems understand like humans do.

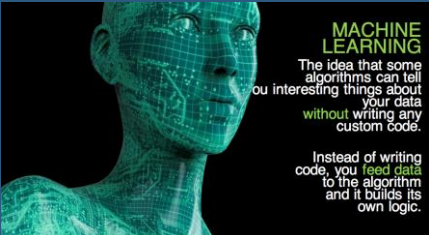

Reasoning
They reason. They understand underlying ideas and concepts. They form hypothesis. They infer and extract concepts.

Learning
They never stop learning getting more valuable with time. Advancing with each new piece of information, interaction, and outcome. They develop "expertise".

.... allowing them to interact with humans.

MACHINE LEARNING / DEEP LEARNING

MACHINE LEARNING
The idea that some algorithms can tell you interesting things about your data without writing any custom code.

Instead of writing code, you feed data to the algorithm and it builds its own logic.

© 2017 International Business Machines Corporation

MACHINE LEARNING – SIMPLE EXAMPLE

Has an APEX.

Has a bridge between sides

"Hole" in the middle, usually triangular, could be other shape.

Has 2 "feet" (sometimes "pins")

© 2017 Memorial Business Machines Corporation

MACHINE LEARNING – SIMPLE EXAMPLE

© 2017 Memorial Business Machines Corporation

Cognitive systems forge a new partnership between man and machine.

Humans excel at:

- Common Sense
- Morals
- Imagination
- Compassion
- Abstraction
- Dilemmas
- Dreaming
- Generalization

Cognitive Systems excel at:

- Locating Knowledge
- Pattern Identification
- Natural Language
- Machine Learning
- Eliminate Bias
- Endless Capacity

Cognitive systems rely on collections of data and information:

Data, information, and expertise create the foundation.

Examples include:

- Analyst reports
- Twitter
- Wire tap transcripts
- Battlefield docs
- E-mails
- Texts
- Forensic reports
- Newspapers
- Blogs
- Wiki
- Court rulings
- International crime database
- Stolen vehicle data
- Missing persons data

...and then leverage Watson APIs to apply cognitive capabilities.

50 underlying technologies

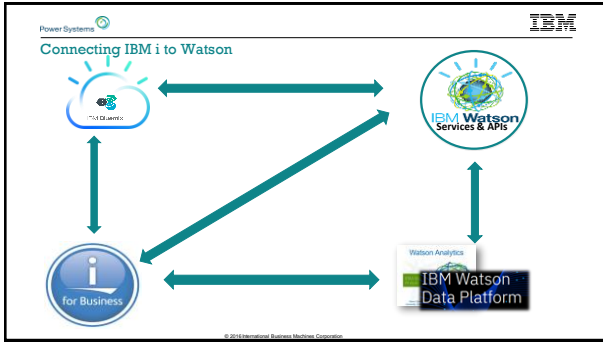

- Entity Extraction
- Sentiment Analysis
- Emotion Analysis (Beta)
- Keyword Extraction
- Concept Tagging
- Taxonomy Classification
- Language Detection
- Text Extraction
- Microformats Parsing
- Feed Detection
- Linked Data Support
- Concept Expansion
- Onting
- Document Conversion
- Language Translation
- Natural Language Classifier
- Personality Insights
- Relationship Extraction
- Retrieve and Rank
- Tone Analyzer
- Emoji: Speech to Text
- Text to Speech
- Face Detection
- Image Link Extraction
- Image Tagging
- Text Detection
- Visual Insights
- Visual Recognition
- AlchemyData News
- Trademark Analytics

The market is validating the benefits of cognitive.

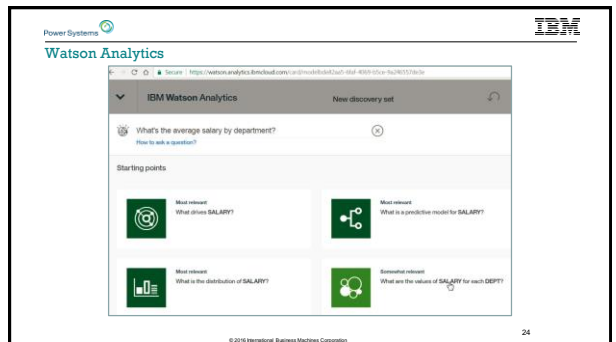

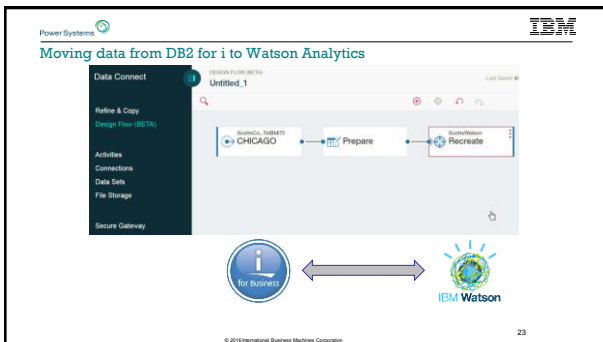

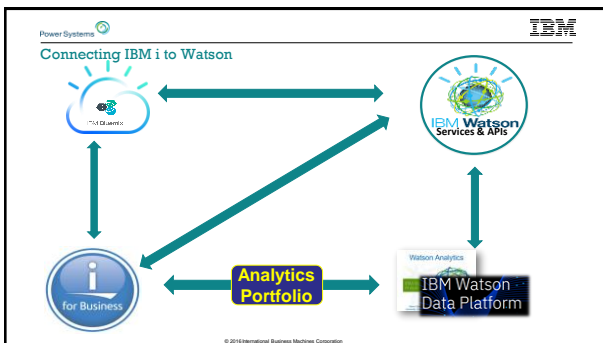

<p>"IBM Crafts a Role for Artificial Intelligence in Medicine."</p> <p>THE WALL STREET JOURNAL</p>	<p>"[Watson] is specifically designed to support the development of a broad range of enterprise solutions."</p> <p>Deloitte.</p>	<p>"No doubt, Watson has the means to radically change the industry."</p> <p>IDC</p>
<p>"IBM Watson represents a bold technological and visionary step"</p> <p>PROSPECT</p>	<p>"What is distinctive about IBM is the breadth of its effort to create Watson tools ... for a wide range of developers."</p> <p>The New York Times</p>	<p>"...it's not just AI algorithms themselves that have improved, but the ability to deliver them"</p> <p>WIRED</p>
<p>"The worldwide cognitive software platforms market will grow to \$30 billion by 2018, at a CAGR"</p> <p>IDC</p>	<p>"IBM's [Watson] can help banks with complex financial operations and attack important health care problems."</p> <p>FST COMPANY</p>	<p>"You can't do this without Watson." - Former Sun CEO Scott McNealy. His startup, Waym, uses Watson to crawl and drag photos.</p> <p>CIO</p>

Power Systems 

Data Catalog

- Data Discovery
 - Find and discover data across multiple on-premise and cloud sources to unlock tribal knowledge and catalog new sources wherever they sit.
- Data Governance
 - Control access to data with automatic policy enforcement, intelligent data cataloging, and enterprise-grade regulatory compliance.
- 360-degree view
 - View and access all of your data assets from on-premise and cloud systems in one place.

Power Systems 

Data Science Experience

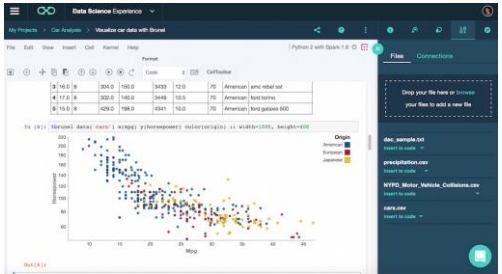

- Data Science Experience (DSX) is a collaborative data science environment with tools (Jupyter, R, Scala) to discover and share insights. Run it on IBM Cloud, your private cloud, or on your desktop.
- Features:
 - Machine and Deep Learning
 - Open Source Technologies
 - Easy Visualizations (no programming required!)

Data security in Watson Analytics

Details about the data security and other topics are answered here:

<https://www.ibm.com/communities/analytics/watson-analytics-blog/ibm-watson-analytics-security-frequently-asked-questions-2/>

Specifications for Watson Analytics	Standards	Encryption
Data centers	SOC2 and ISO 27001 http://www.software.com/compliance	
Operating system	CentOS (see diagram A above)	
Data storage platform	DB2, MongoDB	
Certifications targeted	ISO 27001 certified	
Regulatory Acts	HIPAA Ready Moving forward with FFIEC enablement	
Encryption (data at rest)		aes-cbc-essiv.sha256
Encryption (data in transit)		SSL over http, HTTPS
Logging vendor access	Syalon	

© 2016 International Business Machines Corporation

Power Systems 

Watson and Data Preparation

Data needs to be in a certain state for input into Watson Services. And if this is an ongoing part of your analytics strategy, automating the Data prep will be desired and may consist of:

- Data Consolidation
 - Data spread across multiple application databases, multiple servers/LPARs – even some that is not in DB2 for i
- Data Reorganization
 - Watson services may expect data to be in certain formats
 - Creating single table/file or publishing XML or JSON
- Untangling Data
 - Only the RPG programmer understands how the data is stored:
 - "If field COMPANY = 001, join to File B, else join to File C" logic;
 - Dates stored in non date data types
 - Multiple data elements stored in a single field

© 2016 International Business Machines Corporation

The Data Warehouse

- Data Warehousing or Data Mart Automation
 - The Data Warehouse is still a key system of insight to support advanced analytics
 - Untangled, cleansed data is automatically added to the warehouse nightly
 - The data warehouse becomes the feed for many analytics – advanced and classic Business Intelligence
- Automates processes to ingest or publish unstructured data between DB2 and Watson
 - And automates all the data prep
 - A meta data driven solution also documents the rules the RPG programmer built into the application

© 2016 International Business Machines Corporation

DB2 Web Query DataMigrator ETL Extension

- Meta Data Driven Data Prep
 - Automate consolidation, organization, "untangling" and optionally, the build of a data warehouse
 - Consolidate data from many different data sources
 - Build transforms through SQL, RPG, use of built in or DB2 functions, etc.
 - Can create flat files, relational, incorporate blobs (e.g., XML, JSON)
 - Run data flows off of IBM i job scheduler
- ETL (Extract, TRANSFORM, and Load)
 - All components run in IBM i
 - Multiple load types can be defined
- INTEGRATED with DB2 Web Query
 - Can leverage meta data created with DB2 Web Query or vice versa
 - Shared services and administration

Language Translator

- Request URL -

- Clicked on the link for Language translation
- Under Translate/Get, Click on the option to "Translates the input text from the source language to the target language."
 - Input the following and click **Try it out!**

```
model_id : ja-en
text : This is a test.
```
- "Request URL" is displayed
 - https://watson-api-explorer.mybluemix.net/language-translator/api/v2/translate?model_id=en-ja&text=This%20is%20a%20test
 - The variable parts being the from and two languages (ja-en) and the encoded text (%20 is the encoding for a space).

© 2016 International Business Machines Corporation

Power Systems 

RPG Sample Program using Watson API

- translate_Text() Sub procedure -

- Sample source : ILERPG "TOWATSON.SQLRPGLE" 3/3
 - Construct the URL to make a REST call to Watson to do the translation.
 - Use HTTPGETCLOB to make a REST call to Watson. The returned value is placed in the "textBack" CLOB defined earlier.
 - If data was returned, retrieve the indicated length of data "textBack_Len" from "textBack_Data".

```

C  ctrlr = 'https://watson-api-explorer.mybluemix.net/' +
D  'language-translator/api/v2/translate?model_id=' +
E  'fromLang + '-' + toLang + '&text=' + str2;
exec SQL
D  values char(sysutils.httpgetclob(ctrlr, ''), 256)
into :textBack;
toText = 'blanks';
if (textBack_Len > 0)
toText = %subst(textBack_Data : 1 : textBack_Len);
endif;
return;
end-Proc;
    
```

Personality Insights Python Starter Application

The Watson Personality Insights service uses linguistic analysis to extract a spectrum of cognitive and social characteristics from the text data that a person generates through text messages, tweets, posts, and more.

Try the service

Mr. Vice President, my old colleague from Massachusetts and your new Speaker, John McCormack, Members of the 87th Congress, ladies and gentlemen:

This week we begin anew our joint and separate efforts to build the American future. But, sadly, we build without a man who led a long past with the present and looked strongly to the future. "Master Sam" Rayburn is gone. Neither did he leave nor the Nation in the same without him.

Node.JS and Watson

Summary

You are **shrewd, not stable and grounded**.
 You are **dispassionate**; you do not frequently think about or openly express your emotions. You are **independent**; you have a strong desire to have time to yourself. And you are **reserved**; you are a private person and don't let many people in.

Your choices are driven by a desire for organization.

You are relatively **unconcerned** with both taking pleasure in life and traditions. You prefer activities with a purpose greater than just personal enjoyment. And you care more about making your own path than following what others have done.

How did we get this?

You are likely to...

- be sensitive to ownership cost when buying automobiles
- like historical movies
- read often

You are unlikely to...

- be influenced by social media during product purchases
- prefer style when buying clothes
- be influenced by brand name when making product purchases

Personality (% = percentile)

- Openness: 95%
- Emotional range: 95%
- Conscientiousness: 75%

Consumer Needs (% = percentile)

- Structure: 95%
- Practicality: 75%
- Curiosity: 75%

Values (% = percentile)

- Situation: 21%
- Helping others: 95%
- Achievement: 95%

Integrated Web Services (IWS) server enables IBM i APIs

- IWS Integrated in IBM i
 - First delivered in 2008 – SOAP only
- Since 2016 also delivers RESTful APIs with Open API specifications
- Wizard based creation
 - intuitive web-based graphical interface – just point and click
 - developers with or without IBM i skills can create RESTful APIs
- No new programming languages or development environments to learn
- Supports standard JSON and XML message formats
 - Translates to and from format of IBM i programs

Note: z/OS Connect is comparable to what IBM i has but IBM i is easier to use and seems to be a nicer way to deploy programs as RESTful web services (based on AIX development comments)

© 2016 International Business Machines Corporation

Power Systems 

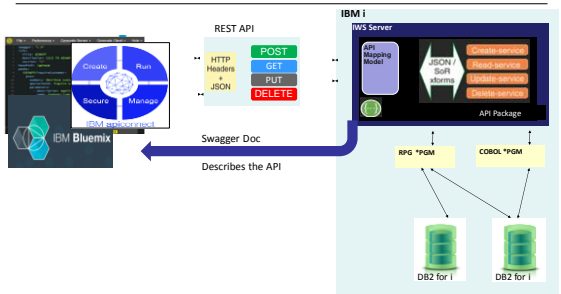

Swagger is the key to integration

- A Swagger document is the REST API equivalent of a WSDL document for a SOAP-based web service
 - Specifies the list of resources that are available in the REST API and the operations that can be called on those resources
 - Specifies the list of parameters to an operation, including the name and type of the parameters
- Delivered on IWS end of 2016 (@ IBM i 7.1 and higher)
- Allows IBM i RESTful APIs to be exposed in various platforms, such as **IBM Bluemix Platform** and **IBM API Connect**

© 2016 International Business Machines Corporation

Power Systems

IBM Systems Hardware Client Technical Team
TAKIGAWA CO., LTD. – Upgrade from POWER5 to POWER8 as IBM i Cognitive Platform
 IMT/Japan, Industry: Enterprise
 Client info: TAKIGAWA is trading company of hairdressing, beauty, aesthetic and nail products in Japan.

Challenge

- TAKIGAWA has been using IBM i 5.4 on POWER5 for nine years as mission critical system.
- With its increasing computing demand, it requires the latest technology solution to accelerate their business. Client wants to design the next system with IBM i.
- Client needs:
 - IBM i technical advisor
 - More performance
 - Cost-Optimization

Solution

- IBM proposed POWER8 and IBM i 7.3 with Watson Analytics as cognitive platform focused on BI. Demonstrate and hold a workshop of DB2 Web Query, Data Migration for i, and Watson Analytics.
- Proposed solution has three BI levels because it's first BI for client:
 - First level: DB2 WebQuery for i Standard Edition, to visualize and analyze IBM i data.
 - Second level: In addition, include Data Migration for i to BI with outside of IBM i. Therefore, Watson Analytics helps DB2 WebQuery for i to get more data selected to enable more data discovery and get new insights from client data.
 - Keep IBM i processor group and core license to get sufficient capacity to run new BI workload.
 - Rational Developer for i to modernize development environment and to develop new application with open source language.

Benefits

- IBM POWER8 Server increase 2.6x performance(CPU) compared to their existing POWER5s, client can run new workload the BI to build new strategies for business.
- IBM i 7.3 provides new capabilities for driving their business, temporal support and enhanced OLAP function help client to perform more advanced analytics.
- Client choose the first level BI solution as a starting point of their IT transformation in 2017, and business partner provide education of DB2 Web Query for i and RDI to acquire new skills.
- Client is considering advanced analytics, IBM and business partner have second and third level BI capabilities with additional software/services. With Data Migration for i, it enables them to increase data sources for analytics by gathering from outside of IBM i. With Watson Analytics, it helps more advanced analytics to gaining new insights from stored in IBM i.
- The client understood the advanced capabilities and potential of POWER8 and IBM i 7.3 to expand their business.

Team

- Takashi Sugata: POWER Tech. Sales
- Ayako Koishi: Systems HW Sales
- NO SOLUTIONS LTD.
- IBM Business Partner:

IBM INTERNAL, USE ONLY

IBM Systems Hardware Client Technical Team
Proposed Solution Architecture

Technical Benefits and IBM Differentiation

- Proposed POWER8 server provides higher performance and then existing system with the same number of cores (2.6x CPU core).
- New server have 2.1x capacity to store increasing data.
- IBM i architecture enables easy migration and version up.
- DB2 Web Query for i provides all in one BI, it is high security and real time analytics.
- Developer workbench provides PIMC computer component for standards.
- IBM demonstrated IBM i with Watson Analytics solution (third level solution), client recognized it is important to build new strategy of business. Client decides to include BI solution.
- New system can be easily applied Data Migration ETL Extension and direct connections to Watson Analytics.
- IBM continues holding workshops with client to adapt higher level BI for expanding their business.

Revenue SHW: 0.11 MS

Architecture Diagram

IBM INTERNAL, USE ONLY

JORI The art of fine seating

How does luxury manufacturer JORI help customers find their perfect furniture?

- Offers 100+ seating frames, fabrics and finishes
- Wanted to help customers visualize possible combinations
- Created a 3D configurator with open source software (ERP)
- Helps customers to create their ideal designs
- 30% faster deliveries, as configurator accelerates manufacturing
- Will use IBM Watson® cognitive technology to help customers find their preferred fabrics

IBM INTERNAL, USE ONLY

Using IBM i, a company of Textile industry in Japan is starting to analyze the sales data with Watson Analytics

Analyze the sales data using Watson Analytics to understand sales trends. Utilize it for their product planning and sales activities.

Points of this project

- Secure connection between IBM i and Watson Analytics using Secure Gateway
- Use Data Connect to upload large data directly from IBM i to Watson Analytics
- Regularly upload with scheduling function of Data Connect

Solution

- Watson Analytics can graph data from various perspectives and grasp the trend with easy operation. (No Excel skill required)
- They can analyze while sharing the screen during the meeting

Infrastructure

Benefits

- Grasp the sales trend by season and size from data and expect to reflect on campaign plan and production plan

Future plans

- Analysis by combining sales data on IBM i with Big data on IBM Cloud
- Reflect analysis result in variable selection at modeling in SPSS Modeler

Customer profile

Head office: Osaka
 Capital: 80 million yen
 Number of Employees: Approximately 100
 Business description: Planning, production, sale of textile products

IBM INTERNAL, USE ONLY

繊維業界 某社様:商品の売り上げ相関を把握！
IBM iのデータをWatson Analyticsで分析開始

売上データをIBM Watson Analyticsを使用して分析し、売上の傾向を把握。商品企画や営業活動への反映を検討。

プロジェクトのポイント

- Secure Gatewayを使用し、IBM i上のデータをセキュアに転送
- Data Connectを使用し、大容量のデータをIBM iから Watson Analyticsに直接アップロード
- Data Connectのスケジュール機能で定期的にアップロード

Watson Analyticsの選定理由

- 簡単な操作で、データをさまざまな視点でグラフ化し、傾向の把握が可能 (Excelのスキル不要)
- 会談中に画面を共有しながら、分析が可能

システム構成図

企業成長への効果および今後の計画

- 売上データから季節やサイズごとの売れ行き傾向を把握し、キャンペーン計画や生産計画への反映が可能
- 今後の計画: IBM Cloudで提供されているビッグ・データとIBM i上の売上データを連携した分析、SPSS Modelerでのモデリング時の変数選択に分析結果を反映

お客様プロフィール

本社: 大阪府
 資本金: 8,000万円
 従業員数: 約100名
 業種内容: 繊維製品の企画、生産、販売

IBM INTERNAL, USE ONLY

The Computer Merchants DNA

Computer Merchants

What we set out to do

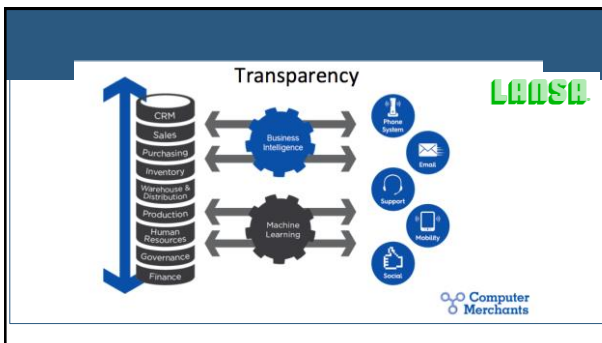

-  **AUTOMATE AND STREAMLINE**
-  **ENHANCE EMPLOYEE MORALE**
-  **CREATE SYSTEMS OF ENGAGEMENT**

Where we started

The results

- Happier staff / less repetitive work / higher value work
- Customers are more informed
- Lowered our cost of sale
- Grown our income

- Oil & Gas**
80,000 sensors in a facility produce 15 petabytes of data
- Public Safety**
520 terabytes of data are produced by New York City's surveillance cameras each day
- Energy & Utilities**
680M smart meters will produce 280 petabytes of data by 2017
- Healthcare**
The equivalent of 300 million books of health related data is produced per human in a lifetime

What will you do with Watson?
